

Read CSCS Cards directly into Access Control

Our access control software is now compatible with CSCS SmartCards. Enrolling a new user on your access control system is as easy as swiping their CSCS card using a contactless desktop reader.

The system then captures the details held on the card and keeps a copy on the system. The turnstile, door or barrier then allows access until the CSCS expires, having given the user a reminder 60 days beforehand to renew their CSCS qualification.

You can also swipe their renewed card to update or query the details you have on file.

Using Heronrange's Access Control system on your site to enforce worker competence, Time & Attendance and security couldn't be easier and quicker, especially when using CSCS Cards.
