

Intelligent Security

The Security Solution Partners
for the Building and Construction Industry

We believe that the success and growth of our business can be attributed to:

- Maintaining customer loyalty by not only caring about the clients' current sites, but also protecting the long-term investment they have made with us
- Providing cost effective packages linked with a quality personal service
- Understanding the importance of an effective fast response
- Commitment to meeting the specific needs of the building and construction industry
- A wide product range, which allows us to tailor a solution to suit a site's specific needs
- In-house technology
- In-house 24hr monitoring station
- In-house 24hr technical support
- Extensive investment in product research and development

Our aim for the future (by continuously improving our product range and the quality of our monitoring and management service) is to become the leading name in Building & Construction Site Security.

Herongrange Limited - Company Profile

Herongrange Ltd. are specialists in providing an integrated range of security solutions for the Building and Construction industry throughout the UK.

- AlertShield Monitored Wire-Free Alarms
- CamShield Remote Monitored Interactive Video Surveillance
- Biometric Access Control
- Manned Guarding & Mobile Patrols

Herongrange is dedicated to providing a complete integrated security solution specifically adapted to meet all challenges on site. We manage all aspects of our security solutions, from initial consultation and site survey through all the stages of system design, manufacturing and installing to system monitoring, on-site response, call-out aftercare and re-commissioning on subsequent sites.

All Herongrange systems are designed, manufactured and monitored in-house at our Northampton facility, providing a constant level of service throughout the UK. We work nationally with SIA registered security companies appointed and managed by us to ensure that your site has a rapid and accountable response in the event of alarm activation.

You have the benefit of a single contact point for all site security requirements and our in-house management team can supply information for costs at tender stage, coverage of a new project or even advice on additional security for special events.

Herongrange Limited - Company Background

Over the last 15 years the Herongrange security systems have been continuously developed and expanded. From a system initially designed to protect computer assets for Land Rover and Jaguar, to the sophisticated multilayer security product we now provide to the building and construction industry.

Our customer base has continued to expand over this period. In the last eight years the building & construction industry has become our core business and we are pleased to be partnering with many of the industry's key players.

Herongrange: Product Overview

The Herongrange philosophy is to provide a monitored modular security system solution, which offers the ability to control losses and protect site 24 hours a day, seven days a week with maximum flexibility.

This we achieve by integrating a combination of overt and covert security systems tailored to your site with a proactive in-house monitoring service.

We understand that sometimes video surveillance is not required, which is why we can offer a choice of systems both of which meet the multi layer criteria covering both the internal and external areas on site or if necessary, can be used as a single layer cover in line with many providers.

AlertShield Wire free detectors for internal and perimeter coverage providing a more economical option, or with sites where Video Surveillance is not possible or practical.

CamShield video surveillance and AlertShield Wire free internal detectors for the optimum level of security and safety.

Herongrange: CamShield Intelligent Imaging System

CamShield video surveillance provides irrefutable proof of our service and is an important deterrent for any organisation that is serious about security and at Herongrange we take your security very seriously. We supply CamShield video surveillance server based systems with remote client access, our unique software and 24-hour, seven days a week recording capacity.

This enables not only out of hours security but daytime recording as well allowing site managers to check on health and safety issues, trace misplaced equipment or even to monitor staff attendance from the server operated system.

Key members of staff can even have access to the cameras from home or the office if required.

It's a totally flexible intelligent imaging system -

why does it need to be intelligent?

Because cameras without an effective activation system, a powerful monitoring system and an accountable response will only give you the recording to look at after the event.

Therefore we use a server-based system for remote management allowing bidirectional communication and facility for downloads and continual upgrades. The camera feeds are continuously monitored electronically, frame by frame from the primary and secondary activation systems, sending through visual alerts to the monitoring centre. Our bespoke interface software translates all movement into a pre-validated audiovisual format for the controllers providing the most attentive and transparent service possible on your projects.

This powerful technology is managed by our in-house IT and Police liaison teams supporting your site and providing footage for prosecutions.

Herongrange: AlertShield Alarm Systems

AlertShield is a wireless system comprising of a control panel and any number of wireless detectors types, operating in a Local Area Wireless Network radius typically up to 300 metres from the alarm panel. Detectors can be heat, vibration or movement sensitive including door contacts and smoke detectors. We deter any access onto site with detectors placed on the site perimeter so we have advanced knowledge of intruders entering site; therefore a response guard can often be there before a static guard would be aware of trouble.

Our AlertShield systems, as with our CamShield systems, are continuously monitored by our in-house control room and the individual detector IDs allow us to pass information to the site manager as to exactly where security may need strengthening. These systems can operate independently from phone lines and continuous power supplies so that we can cover your project as soon as site starts.

All CamShield and AlertShield system parameters are constantly monitored to ensure the correct operation. This is backed up by our nationwide engineer coverage to attend to emergencies allowing you to leave security firmly in our control.

Herongrange: Monitoring

Our controllers are well trained, experienced and intelligent as they hold the reputation of Herongrange and the safety of your site in their hands. They can see more of your site than a guard. They use all the tools of a live audio link to site with CamShield and exact locations for

the AlertShield detectors to direct response to the correct area. They ensure that the response companies arrive on time, do a thorough check and then evaluate if you need to be advised. They arrange additional services, liaise with the Police and get to know your site movements.

Herongrange: Additional Modules

Biometric Access Control With optional time & attendance recording, utilising third generation fingerprint, hand and Iris recognition and turnstiles with or without a supervising guard.

Mobile & Static Manned Security We have an established national network of security companies primarily for alarm response and key holding, therefore we can source manned guards or arrange mobiles as part of our package.

Vehicle Access Barriers We are able to supply install and manage a wide range of manual and automatic vehicle access barriers that can be linked to biometric access control systems.

Time Lapse Video Production Either stand alone or integrated as part of our Intelligent Imaging video surveillance system. This gives the ability to compress a whole project build into a short video for you or your clients records.

Project Management Team An important part of our security solution package is access to our management and technical support team, 24 hours a day. We pride ourselves on being able to source and supply all of our clients' site security needs and facilities; we are our clients' first port of call. At Herongrange we take our clients' security very personally.

Our reputation is built by caring about your site.

Herongrange: Applications

We are currently involved with:

Civil Construction: Road/Rail Projects, Utilities, WWT Works, Flood Alleviation.

Special Projects: PFI contracts, Government Contracts, Hospitals, Schools.

Civil Building: Hotels, Superstores, Universities, Business & Industrial Units

House Builders: Private Residential, Social Housing, Apartment Blocks, Retirement Flats.

These are all vulnerable areas and Herongrange have the experience on all these types of sites to benefit your project and take the risk out of security.

The vast majority of our customers purchase the systems as it does not cost any more than a hire scheme and we believe that partnering means being honest on costs; therefore subsequent sites only pay for refurbishment, service and monitoring and we include a new 12-month warranty. Your investment is looked after and tracked with management reports when the systems are active or in our storage.

We find that security is often neglected until there is a problem however it has significant effects on production and profits. Consulting us at an early stage for the benefit of professionalism and the ethos of partnering with our clients, even if it is only on one site, makes the difference on your bottom line and your daily headaches.
